If you've never heard of VoIP, get ready to change the way you think about phone calls. VoIP, or Voice over Internet Protocol, is a method for taking a normal telephone conversation, and turning it into digital data that can be transmitted over the Internet.

Cat 5, short for Category 5, is the current preferred industry standard for network and telephone wiring. Cat 5 is an unshielded twisted pair type cable exclusively designed for high signal integrity. The cable consists of four pairs of 24-gauge twisted copper pairs terminating in an RJ-45 jack.
